

JavaScript Functions: Assignment Questions

1. **Display a Welcome Message:**

Create a function without parameters that displays a welcome message like “Welcome to Our Restaurant” inside an `<h2>` tag using `innerText`.

2. **Show Customer Name on Click:**

Write a function that takes a customer name as a parameter and displays "Hello, [CustomerName]!" using `innerHTML`.

3. **Calculate Square of a Number:**

Create a function that accepts a number as a parameter and displays its square using `innerText`.

4. **Display Product and Price (Default):**

Write a function that takes product name and price (with price as a default parameter = 100). Display both using `innerHTML`.

5. **Create a Function to Greet with Default Name:**

Create a function that greets a user by name, and if no name is passed, defaults to "Guest".

6. **Dynamic Item Billing:**

Create a function that takes item name, quantity, and price per unit. Calculate and display the total bill dynamically inside a `<div>`.

7. **Multi-Button Dynamic Menu Generator:**

Create 3 buttons – each shows a different menu item and price using the **same function** with parameters.

8. **Smart Discount Calculator with Defaults:**

Write a function that takes amount and an optional `discountPercent` (default = 10%). Display final amount after discount using `innerText`.

9. **Dynamic Summary Card Generator:**

Create a function that takes 4 parameters: customer name, item name, quantity, and price per item. Display a styled summary card using `innerHTML` with full order details and total.

10. **Interactive Quantity Updater with Live Total:**

Create "+" and "-" buttons to increase/decrease quantity of an item. Use a function with parameters to update and display the live total using `innerHTML`.
